Calculating Total IPC Victory Points:
 Add up total IPC's one side is up or down; Ex: the Axis have gained 9 IPC's above their starting total but are down 4. Then add in the bonuses per the chart. Lets' say one of the total 9 IPC's the Axis have captured is Karelia/Leningrad; this adds **10 bonus points** to their total giving them an over all IPC count of: (9 (IPC's up) + 10 (Karelia bonus) - 4 (IPC's down) = **15** (Final IPC total). Add this number to the Axis' base of 170 and subtract it from the Allies base of 181 and you have your final score: **Axis 185 to Allies 166. The Axis Win!**

***Please note: the BONUS for each country is the VC Pts (minus) IPC value = Bonus**
